TECHNICAL AND FINANCIAL SKILLS

- Programming & Software Engineering
- Data & Systems
- Financial & Analytical Tools

LANGUAGES

- Arabic | Native
- English | Advanced

SUMMARY

Third-year Computer Science Engineering student with strong analytical, quantitative, and problem-solving skills, combined with a deep interest in financial markets, corporate finance, and capital markets. Experienced in software development, data analysis, and financial modeling through academic projects and self-directed investment analysis. Adept at translating complex technical and financial information into clear, actionable insights. Highly motivated to build a long-term career within a global financial institution at the intersection of technology and investment banking.

EXPERIENCE

SOFTWARE ENGINEERING EXPERIENCE

Academic & Personal Projects.

- Developed applications using Python / Java / C++, applying object-oriented design principles
- Participated in team-based lab projects, collaborating on problem definition, implementation, and testing
- Solved complex problems using algorithmic thinking and structured decomposition
- Gained exposure to application development workflows, debugging, and performance considerations
- Worked with data inputs, validation logic, and result interpretation

INDEPENDENT EQUITY & MARKET ANALYST

Self-Directed.

- Conduct in-depth analysis of publicly traded companies across fintech, healthcare, payments, and consumer sectors
- Perform financial statement analysis, peer benchmarking, and relative valuation (P/S, EV-based multiples)
- Analyze earnings reports, guidance, dilution events, capital allocation, and regulatory risk
- Assess macroeconomic trends (interest rates, policy changes) and their impact on company fundamentals
- Build structured investment theses and summarize findings in presentation-ready formats
- Apply independent judgment to distinguish market sentiment vs underlying fundamentals

EDUCATION

BSC IN COMPUTER SCIENCE ENGINEERING

University of Pécs. Pécs, Hungary | Sep 2023 - Present

Relevant Coursework:

Data Structures & Algorithms, Object-Oriented Programming, Databases, Software Engineering, Probability & Statistics, Linear Algebra, Operating Systems, Computer Networks
